

# Sichen Guo

UX Designer | Human AI Interaction designer | Product Designer

## CONTACT

+31 (0)6 33417585

[sichen.guo.work@gmail.com](mailto:sichen.guo.work@gmail.com)

Veldhoven, NL

[linkedin.com/in/sichenguo](https://www.linkedin.com/in/sichenguo)

## UX SKILLS

UX Research & Usability Testing  
Interaction Design & User Flows  
Wireframing & Prototyping  
Information Architecture  
Design Systems & Components  
AI-Assisted Design Workflows  
Accessibility & Inclusive Design  
Figma · Framer · Miro  
Agile / Scrum  
Data-Informed Design

## LANGUAGES

Chinese — Native  
English — Professional  
Dutch — Basic

## EDUCATION

### EngD — Human–System Interaction

TU/e · 2023–2026

*AI-human interaction, responsible design, LLM applications*

### MSc — Industrial Design

TU/e · 2021–2023

*Research-through-design, gamification, interaction systems*

### BEng — Industrial Design

Harbin Engineering University · 2017–2021

## PROFILE

Engineer Doctorate ([EngD](#)) graduate (TU/e, Human–System Interaction) with 3 years designing user-centred digital products in academic and industry environments. Led **end-to-end UX** for **AI-powered tools** — from **user research** and **information architecture** to **high-fidelity Figma prototyping** and **usability testing** with real users. Experienced working within and contributing to design systems in Agile cross-functional squads alongside engineers, product managers, and domain experts. Particularly strong at making complex, information-dense products clear and accessible — across AI tools, B2B platforms, and educational products used at scale.

## EXPERIENCE

### UI/UX Designer

 DTT Multimedia, Amsterdam · 2026 – Present

- Leading and contributing UXUI for two B2B products: **Flamma** (fire safety management for building inspectors) and **MediaMasters** (educational platform in 3,500+ Dutch primary schools); translating complex professional workflows into clear, accessible interfaces.
- Working with clients, product designers, and engineers in Agile sprints; handling end-to-end UX from user flows and wireframes through Figma prototypes to dev-ready handoff.
- Integrating AI into design workflow (Figma AI, Claude + MCP) for research synthesis, design iteration, and knowledge management.

### UX/AI Designer & EngD Researcher

 Eindhoven Engine · Sep 2023 – Present

- Led user research and interaction design for **Mijke** — an AI-powered guidance tool; conducted structured interviews, usability tests, and cognitive walkthroughs with ~15 social practitioners.
- Defined information architecture and conversational user flows for an **LLM-driven interface**; translated complex AI outputs into clear, accessible interaction patterns validated through testing.
- Designed and iterated high-fidelity prototypes in Figma. Phase 1 testing showed task performance rising sharply while accuracy stayed flat, revealing the real barrier was anxiety about engaging with the letter, not comprehension, which reshaped the entire design direction.
- Collaborated in a cross-functional Agile squad with engineers, domain experts, and policymakers; participated in sprint planning, demos, and backlog refinement.

### Product Design Intern

 Studio Tast, Eindhoven · Sep 2022 – Aug 2023

- Designed interactive digital products from wireframes through high-fidelity; facilitated co-design sessions with Eindhoven municipality and **6+ cross-sector stakeholders**.
- Synthesised user research findings into design recommendations; conducted usability evaluations and competitive analysis to refine interaction designs.
- Documented design decisions and edge cases for developer handoff; coordinated with engineers on component implementation.

### Teaching Assistant — Research Through Design

 TU/e · 2024–2025

- Guided 3 student groups through full research-and-design cycles; reviewed prototypes and gave structured feedback on methodology, research quality, and output.

## SELECTED PROJECTS

**Mijke — AI Guidance Tool** [Figma · UX Research · LLM] End-to-end UX for an AI-powered navigation tool for social services users. Built **MatchEval**, an LLM-as-judge evaluation platform scoring live conversations against five practitioner-defined criteria; latest run (28 conversations, 699-org dataset) shows a **54% ground-truth match** rate and pinpoints accuracy/trust — not language clarity — as the system's real gap. [Project link](#)

**AI Text Simplification** [UX Research · GPT-4 · Prototyping] — Designed and tested an AI tool making complex institutional texts accessible to low-literacy users — research-driven information design meets NLP. Peer-reviewed.

**MediaMasters** [Figma · Design System] — UX/UI design for a web teaching simulation used in 3,500+ Dutch primary schools; design system work, engineering collaboration, and iterative release cycles. [Project Link](#)
